

KEYS 2018 on Green Cities

**Paris Diderot-Kitakyushu Knowledge Exchange by Young Scholars on Green Cities
8-9 novembre 2018**

Background: The cities of Chicago, Paris, Kitakyushu and Stockholm have been selected by the Organization for Economic Co-operation and Development (OECD) as model cities for green growth around the world (Green Cities). Green city programs have been proposed in the OECD reports for each of these cities as pilot cases to examine the potential for green urban growth.

The main objective of this KEYS 2018 workshop was to promote exchanges between students of the Master 2 Espace et Milieux of the University of Paris Diderot and students of the University of Kitakyushu around the sustainable development of our respective cities. The meeting focused in particular on the analysis of the recommendations made in the OECD reports produced for the city of Paris and the city of Kitakyushu. This exchange was facilitated by the establishment of a memory of understanding between our two universities in 2017. This meeting participates in the preparation of the 2nd Workshop for the Academic Alliance among the OECD-selected Model Cities for Green Growth, which will be held in Paris in winter 2019 as part of the Ecological Territories symposium jointly organized by the University of Paris Diderot, the University of Chicago, the University of Kitakyushu and the “fondation pour l’Ecologie Politique” (FEP). These works will be considered for contribution to an OECD publication.

Program:

Thursday the 8th:

Workshop (program below)

Friday morning the 9th:

Visit and discussion in the Laboratoire Interdisciplinaire des Énergies de Demain (LIED-UMR 8236)
